Profile

Results-driven integration developer/architect with expertise in designing and implementing seamless software solutions. Proven ability to optimize data exchange, enhance system connectivity, and troubleshoot integration challenges for streamlined operations.

Education

Bachelor's degree, Faculty of Technical Sciences, Novi Sad

10/2017–12/2021

Electrical and Electronics Engineering

Employment History

Integration Specialist at TNation, Belgrade

08/2024–05/2025

- Developed and maintained REST and SOAP web services to support business needs. Utilized JSON and XML for effective data interchange between different systems. Leveraged AWS cloud services for hosting and managing integration solutions, ensuring scalability and reliability. Worked extensively with MongoDB for managing and retrieving data in a NoSQL environment. Created and managed APIs using Swagger and OpenAPI specifications to standardize communication between services. Collaborated with cross-functional teams using Jira and Confluence for efficient project management and documentation. Troubleshot and resolved integration issues to maintain system integrity and performance.
- Clients: XL-Byg, Denmark via EpicoIT, Denmark
- Tools/Tehnologies/Skills: Java, Software AG WebMethods, REST, SOAP Web Services, JSON, XML, MongoDB, Swagger, OpenAPI, Jira, Confluence, Git

Integration Architect at Schneider Electric, Novi Sad

12/2022–12/2023

- Technical leadership responsibility for one or more concurrent projects that require custom software design and deployment and implementation services. For each project to which he/she is assigned, the Solution Architect should have a full understanding of the complete project technical strategy, the implementation requirements and how multiple pieces of the implementation will fit together. Work with Project Managers to define the best technical approach to meet customer business requirements using one or more Schneider offerings. Lead project requirements gathering workshops and develop resulting documentation. Lead the design and documentation of proposed customer solutions based on defined requirements, included data model schema definition, functional requirements, integrations. Work directly with other groups within the Delivery organization to develop and validate proposed solutions and designs. Lead solution design review sessions and obtain design approval from customers. Provide technical guidance to other members of the department. Prepare project analysis, design, functional and interface specification documentation. Perform system, database, application, and network capacity planning for clients. Lead/support data migration design and consulting. Oversee configuration, test planning and test execution on one or more concurrent projects.. Support the development and maintenance of group expertise of the utility business, workflows, and applicable technologies.
